Nutrient science by Damaco Group

Maximise your crop potential with Aphasol™ biostimulant

Onions | shallots

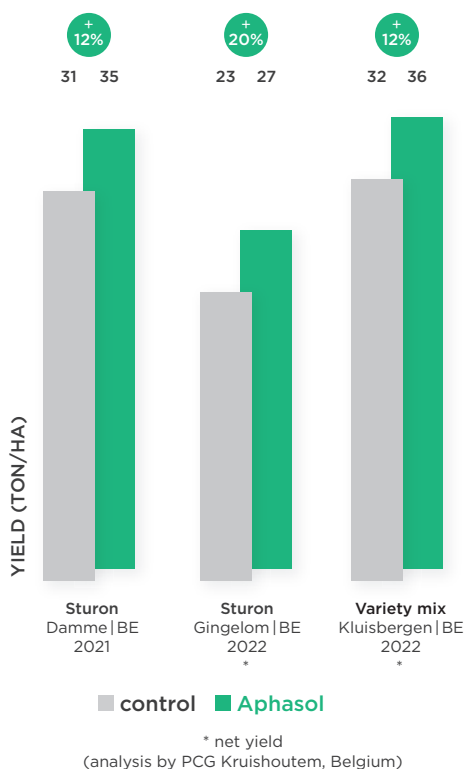

-  Improved stress tolerance
-  Optimisation of nutrient use
-  Larger calibres
-  Higher yields

Aphasol is a highly effective, liquid biostimulant for foliar application. It increases **abiotic stress tolerance** and improves the **uptake and efficient use of nutrients**. Aphasol provides the plant with the necessary **amino acids**, which saves time and energy, resulting in higher yields and better quality onions and shallots.

Aphasol is a product developed in collaboration with Ghent University and produced in Belgium from locally sourced raw materials.

Application advice

- Aphasol is a **foliar application**. The product is soluble in water and can be used in combination with most common fertilisers and crop protection products. 3-5 l of Aphasol should be mixed with 150 l of water.
- For onions and shallots we advise 5 applications of **3 l/ha** every 7-10 days with 1st application at start of bulb formation (BBCH41).
- Product certified for **organic farming**.

“ At harvest, the difference in yield was visible to the naked eye. There were also more onions of larger calibre, which means less costs for further processing.
