

aphasol

Nutrient science by Damaco Group

Maximise your crop potential with Aphasol™ biostimulant

Flax

-  Improved stress tolerance
-  Optimized use of nutrients
-  More long fibers
-  Higher yields

Aphasol is a highly effective liquid biostimulant for foliar application. It increases **tolerance to abiotic** stress and improves the **uptake and efficient use of nutrients** by the plant. Aphasol provides the necessary **amino acids** that save the plant time and energy, resulting in higher yields and better-quality flax.

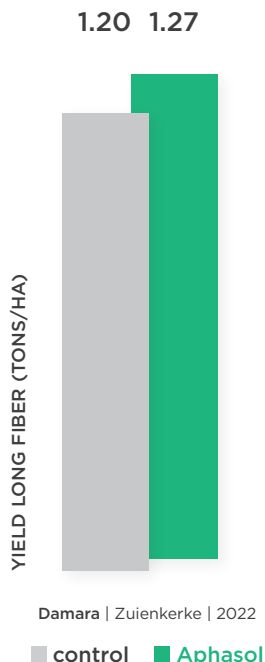

Aphasol is a product developed in collaboration with Ghent University and produced in Belgium from locally sourced raw materials.

MADE IN BELGIUM

Test results

Visit www.aphasol.com for more results

- Trial on Damara flax | Zuienkerke, 2022
- Aphasol dosage: 3 applications of 3 l/ha in combination with crop protection products.
- Aphasol-treated parts showed a higher gross yield and higher long fiber yield.
- The additional yield of Aphasol-treated parts was 70 kg of long fiber per hectare or +6%.

long flax fibers

Application advice

- Aphasol is a **foliar application**. The product is water soluble and can be used in combination with the most common fertilizers and crop protection products. 3-5 l of Aphasol should be mixed with 150 l of water.
- For flax, we recommend 2 to 3 applications of **3 l/ha** in combination with the intended crop protection products.
- Also suitable for **organic farming**.
