

## Maximise your crop potential with Aphasol™ biostimulant

### Onions | shallots

-  Improved stress tolerance
-  Optimisation of nutrient use
-  Larger calibres
-  Higher yields

Aphasol is a highly effective, liquid biostimulant for foliar application. It increases **abiotic stress tolerance** and improves the **uptake and efficient use of nutrients**. Aphasol provides the plant with the necessary **amino acids**, which saves time and energy, resulting in higher yields and better quality onions and shallots.

Aphasol is a product developed in collaboration with Ghent University and produced in Belgium from locally sourced raw materials.

## Application advice

- Aphasol is a **foliar application**. The product is soluble in water and can be used in combination with most common fertilisers and crop protection products, in a 2-5% mixture.
- For onions and shallots we advise **1.5–2 l/ha** with each crop protection treatment, with 1<sup>st</sup> application at 2<sup>nd</sup> leaf stage (BBCH12).
- Product certified for **organic farming**.

“At harvest, the difference in yield was visible to the naked eye. There were also more onions of larger calibre, which means less costs for further processing.”

FREDERIK GOEDHUYS | Linter | Belgium
