

## Maximise your crop potential with Aphasol™ biostimulant Apple

More homogeneous fruits

Stable growth end of season

Fewer fruits aborted when stressed

**Higher yields** 

Aphasol is a highly effective liquid biostimulant for foliar application. It increases abiotic stress tolerance and improves uptake and efficient use of nutrients by apple trees. Aphasol provides the necessary amino acids, allowing plants to save time and energy, resulting in higher yields and better quality apples.

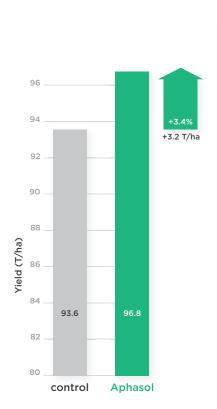

Aphasol is developed and produced in Belgium, using pure, unprocessed by-products from local poultry processing plants.

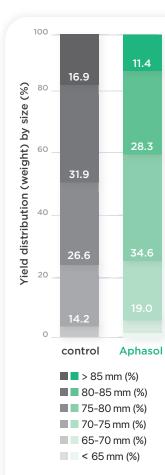

## **Test results**

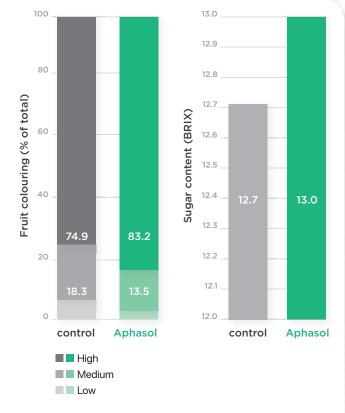

## Results for 2023 plot trial with 4 replications

conducted by CTIFL (research station la Morinière, FR) on variety Pink Lady (Rosy Glow)

- More homogeneous fruit sizes with more fruits in the category between 70 and 80 mm.
- Higher fruit maturity level, which explains the stronger colouring.
- Significant higher sugar content (BRIX).

## **Application advice**

- Aphasol is a foliar application. The product is soluble in water and can be used in combination with most common fertilisers and crop protection products.
- 5-6 applications of **5 L/ha** with 2 applications before flowering (BBCH57-59), 2-3 applications after flowering and a final application 2 weeks after harvest.
- An adjuvant is recommended if not already present in the mixture of crop protection products.
- · Also available for organic farming.
